CS399 - CS Comps Notes of work — Conrado Peña Lemes
Time Spent: 10 hours — Collaborators:

6/10/26: I added a basic "predict from file" function that I am not even sure works, also I tested how well my otsu's assignment is at real-time detection, turns out not very, but it is interesting to see it works. I also tested how the resizing function in cv2 works, and seeing what happens if we resize the image down and then back up, and how that affects runtime. Turns out, runtime improves! But also image quality is bad. 9/10/26: I worked on setting up a set of messages from console that we can use to define what we want the behaviour from YOLO to be. it is stored in "Tests" under console2.py
